

Physics

Level of Difficulty	Estimated Homework	Prerequisites
<input type="checkbox"/> Moderate <input checked="" type="checkbox"/> Difficult <input type="checkbox"/> Very Difficult	60 minutes per day* *This is a general guideline for planning and scheduling purposes. A student's ability level may affect actual preparation time needed.	District Completion of Geometry and concurrent enrollment of Algebra 2 Department C or better in Chemistry or AP Chemistry Completion of Algebra 2 Please see student background expectations

Student Background

A student entering College Preparatory Physics should be able to:

- 7th grade Science Investigation and Experimentation Standards:
 - Select and use appropriate tools and technology (including calculators, computers, balances) to perform tests, collect data, and display data.
 - Use a variety of print and electronic resources (including the internet) to collect information and evidence as a part of a research project.
 - Communicate the logical connection among hypotheses, science concepts, tests conducted, data collected, and conclusions drawn from the scientific evidence.
 - Communicate the steps and results from an investigation in written report and oral presentations.
- 8th grade Science Investigation and Experimentation Standards:
 - Plan and construct a scientific investigation to test a hypothesis.
 - Construct appropriate graphs from data and develop quantitative statements about the relationships variables.
 - Apply simple mathematical relationships to determine a missing quantity in a mathematic expression, given the two remaining terms (including $\text{speed}=\text{distance}/\text{time}$, $\text{density}=\text{mass}/\text{volume}$, $\text{volume}=\text{area} \times \text{height}$)
- 9th-12th Science Investigation and Experimentation Standards:
 - Formulate explanations by using logic and evidence.
 - Distinguish between hypothesis and theory as scientific terms.
 - Identify possible reasons for inconsistent results, such as sources of error or uncontrolled conditions.
 - Analyze situations and solve problems that require combining and applying concepts from more than one area of science.
 - Solve scientific problems by using quadratic equations and simple trigonometric, exponential, and logarithmic functions.
 - Identify and communicate sources of unavoidable experimental error.
- Algebra 1 Standards:
 - Interpret and use ratios in different contexts to show relative sizes of two quantities, using appropriate notations.

- Graph linear functions, noting that vertical change (change in y-value) per unit of horizontal change (change in x-value) is always the same and know that the ratio is called the slope of a graph.
- Students apply algebraic techniques to solve rate problems, work problems and percent problems.
- Identify and use the arithmetic properties of subsets of integers and rational, irrational, and real numbers, including closure properties for the four basic arithmetic operations where applicable.
- Understand and use such operations as taking the opposite, finding the reciprocal, taking a root, and raising to a fractional power.
- Students simplify expressions before solving linear equations and inequalities in one variable, such as $3(2x-5) + 4(x-2) = 12$.
- Students solve multistep problems, including word problems, involving linear equations and linear inequalities in one variable and provide justification for each step.
- Solve a system of two linear equations in two variables algebraically and are able to interpret the answer graphically.
 - Solve a quadratic equations.
- Geometry/Trigonometry Standards:
 - Use Pythagorean theorem.
 - Solve problems involving the perimeter, circumference, area, volume, lateral area, surface area of common geometric figures.
 - Use trigonometry functions to determine x and y components of a triangle given the answer.
- Algebra 2 Standards:
 - Students understand the inverse relationship between exponents and logarithms and use this relationship to solve problems involving logarithms and exponents

Course Description

The course surveys the fundamental concepts of physics from its historical development, though mechanics, energy, electricity, magnetism and thermodynamics, to relative and nuclear physics. Emphasis is placed on problem solving skills and the analysis of results.

Students will explore these topics through discussions, laboratory investigations, teacher demonstrations, and in-class assignments. This course is aligned with the California State Standards in Physics.

Grading

The grading system is based on weighted percentages. Each assignment will have a point value and be weighed according to the category it falls under. Individual teachers may make slight modifications on the weighted percentages.

Category	Weight
Homework/Class work	20%
Laboratory/Projects	30%
Quiz/Exams	50%
